

**Central to a desktop lifecycle management strategy** is the need to automate and standardize the deployment of software. To achieve consistent deployment of line-of-business applications across the enterprise, IT administrators need a powerful but intuitive environment to standardize and customize application installers. **MSI Studio** is an application packaging solution that does exactly that for MSI-based application installers.

**MSI Studio** is a comprehensive application packaging solution that lets administrators achieve the results they want from MSI-based application installers. Whether building an installer for a legacy application, modifying existing MSI installers, or customizing an unattended install by developing a response transform (MST), MSI Studio delivers dependable and consistent software installations.

MSI Studio was designed for the IT administrator, not the developer. Wizards make it easy to capture installs, create custom action, wrap legacy installers and create transforms, and to edit the results.

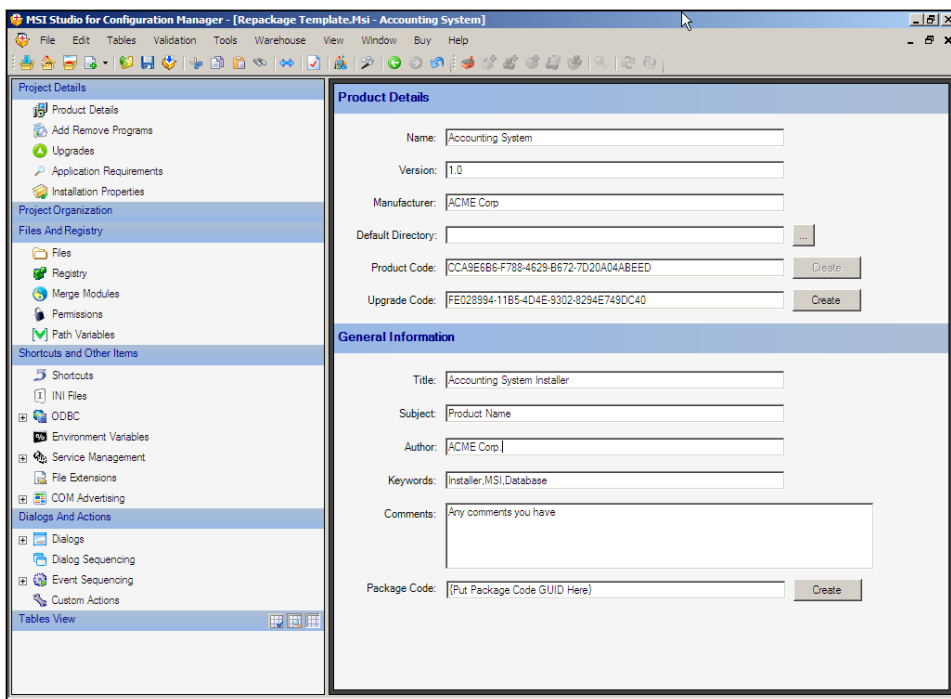

### MANAGE THE ENTIRE APPLICATION LIFECYCLE

Applications, even internally developed ones, change and mature over time. MSI Studio makes it easy to support every stage in the application lifecycle. Create installers for new applications, create patches and upgrades as applications evolve.

### INTEGRATES WITH DESKTOP MANAGEMENT

MSI Studio can be used standalone, or can easily pass completed MSI packages to either Desktop Authority, or Microsoft System Center Configuration Manager 2007.

MSI Studio centralizes every aspect of application packaging into a single, administrator-friendly, easy-to-use interface, making packaging an efficient and productive task.
